When investors bought the lands in 1978, they found a degraded forest where valuable wood had been cut down to produce coal and railroads. The zone was getting deserted and its inhabitants were emigrating to bigger cities. There did not exist sources of work neither future for the inhabitants.

Thirty years were necessary to develop this exceptional farm of thirty thousand hectares. Even minimum details were studied, Orography, Rainfall, Temperatures, winds and its directions, Light and Sun hours. An exhaustive soil map was made to determine the competence of each micro-zone for our cultivations. We find ourselves with deep and well-drained soils, and abundant Organic Matter and water for irrigation in quantity and quality.

It really was a **TEMPTING CHALLENGE**. There was no experience in any cultivation or any known agro-industry, in the area.

We sow fifteen thousand hectares annually between soy, corn and safflower, with increasing productions by hectares, as a result of seed selection and application of the most modern technologies. We carry out direct seeding and rotation, promoting the proper conservation of soil and preventing degradation.

The design of one of the mayor lemon plantations in the world in just one year, demanded the collaboration of technicians and specialists from Argentina, Spain, Israel, Brazil and United States. Accumulated experience was taken into account and a project for two thousand five hundred hectares was arranged, with more than six hundred thousand citric plants, providing the most advanced technology and most productive varieties in our microclimate.

We produce precious woods in intensive cultivation, with cloned plants from the best species adapted to our microclimate. In the following years we will complete the original project of ten millions trees and we will install the industry to process the totality of our wood. We count with a Clonal Garden of three hundred and fifty hectares, where the best clons are selected and obtained for their multiplication.
